

Extending its impressive choice of energy efficient boilers, commercial heating specialist, Potterton Commercial, is launching its Eurocondense two range. The new design, floor-standing condensing boiler uses the latest technology to deliver excellent energy efficiency. Available in eight outputs, 90, 120, 160, 200, 250, 320, 400 and 500 kW, the Eurocondense two is the perfect choice for applications where high outputs are required.

In response to customer feedback, the Eurocondense two has an innovative, easy to use 'Integrated System Regulator' (ISR) controls platform. This includes inbuilt time control facilities for heating and DHW, servicing and commissioning functions, a parameter reset function, a full text display of parameters and fault diagnostics, input and output testing and simpler programming and end user settings.

The Eurocondense two silicon/aluminium alloy heat exchanger offers optimum heat transfer through a unique monoblock, modular design which further increases its energy efficiency.

Ken Percival, managing director at Potterton Commercial, says: “We are constantly reviewing our commercial offering and developing new products to meet the needs of our customers.

“We have always championed the use of controls to optimise energy efficiency and since the introduction of Part L, the importance of control optimisation has thankfully enjoyed a much higher profile. Our extensive research among specifiers, installers and end-users highlighted the importance of the user interface. Using this feedback we have developed a new and improved control panel making it easy for users to ensure their boiler is running as efficiently as possible.”

The Eurocondense two is manufactured to the latest production standards and offers a lifetime guarantee on the silicon/aluminium alloy heat exchanger.
